

Asia Pacific Geothermal

A Webinar Series

Hosted by:
The Asia – Western Pacific Regional Branch of the International Geothermal Association

An Update from Papua New Guinea: Geothermal investigations of Feni Islands, and the new National Energy Authority

Tuesday, 25 May 2022
4:30 – 5:30 pm (NZ time, +12 UTC)

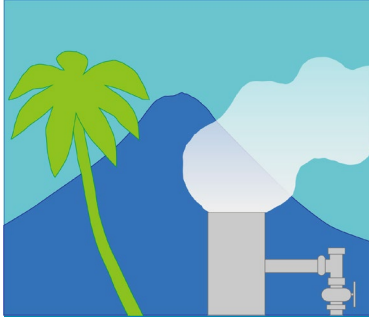

Link for Free Registration: [Asia Pacific Geothermal](#)

Conrad Kumul
Geochemist,
Mineral Resources Authority,
Port Moresby, Papua New Guinea

Conrad will present the results of recent exploratory investigations on the Feni Islands, 150 km southeast of Lihir Island (New Ireland Province), that indicate the presence of a high temperature geothermal resource (>250°C) with a reservoir influenced by mixing of seawater, meteoric and deep geothermal waters. Also, he will report on the recent establishment of the National Energy Authority, which enables the government to better regulate the national geothermal sector and other renewable energy sources of Papua New Guinea.
